

Loader buckets

Type designation: NL050 - NL130

Buckets in this category are fitted on wheel loaders with the machine curb weights from 5.5-30 tons. They are produced in the version as light loader buckets - **L (Light)**, earth moving buckets - **HD (Heavy Duty)** and rock buckets - **R (Rock)**.

Light loader buckets

Light-version buckets are used for loading light loose material such as wood chips, coal, grain crops, etc. Each bucket is characterized by large capacity with excellent penetration while keeping the material being loaded. Buckets may be equipped with additional replaceable blades.

Earth moving buckets

HD-version buckets are suitable for work with soil and for loading various material types. These buckets enable excellent penetration and keeps the material being loaded with great reliability. These may also be equipped with welded adapters, replaceable teeth and inter-proximal segments or additional replaceable blades.

Rock buckets

Rock-version buckets have significant penetration properties in demanding work under quarry conditions. A high ratio of wear resistant material enables a long life-cycle. These may be equipped with V- or direct type blades as well as adapters with replaceable teeth.
