

## Other accessories

Metalport's range of production also includes many other accessories for various machine types such as adapter plates for hammers and shears, ripper mandrels, forklifts, snow ploughs, forks for silage, demolition attachments, etc.

### Forklifts

Designed for transferring or loading bulk materials; these are fitted on a bearing structure with manual fork shifting. They may be equipped with a hook system for anchoring on wheel loaders or hydraulic excavators.

### Ripper mandrels

Used in quarries, in extraction and in demolition work, etc. These stand out with their robust structure with wear resistant elements in spots impacted by stress.

### Adapter plates

Adapter plates are used to attach hydraulic hammers and shears to the machine. They may be fitted with hooks for anchoring on a quick coupler.

For direct anchoring on pins

For connecting to CW quick coupler

For connecting to Lehnhoff quick coupler

Skid loader adapter plate

### Forks for silage

They are used in agricultural production and when transporting silage, straw packs or other material. They are mostly fitted on telescopic manipulators.

### Snow ploughs

Plough for clearing roads, pavements, car parks and other areas. They may be equipped with various suspension systems for anchoring behind tractors, on forklift trucks, etc.

### Supporting legs

They are used to stabilise wheel excavator during work activities.

### Front ploughs for graders

Ploughs for wheel graders, which are fitted on the front of the grader enable improvement and extension of grader work activities.
